EDUCATION

Yonsei University

B.S. in Computer Science

- Leave of absence for military service : Feb 2023 - Aug 2024

Seoul, Korea

Mar 2021 - Present

EXPERIENCE

NXN (Industry-Academic Cooperation via YAI)

Project Member

Seoul, Korea

Jan 2026 - Feb 2026

- [** Specific technical details are abstracted to comply with a Non-Disclosure Agreement (NDA).*]
- Fine-tuned a state-of-the-art diffusion model to resolve demographic biases, significantly improving identity preservation in targeted image generation.
- Engineered a large-scale, automated data collection and preprocessing pipeline, including custom mask generation techniques for precise region-of-interest targeting.
- Redesigned the input architecture of Transformer-based models to optimize multi-image conditioning and feature extraction.

Data & Language Intelligence Lab

Research Intern

Yonsei University

Jul 2025 - Dec 2025

- Engineered an automated Multimodal LLM pipeline that directly extracts and processes Image and Text data from external URLs to generate human-like contents.
- Implemented a RAG (Retrieval-Augmented Generation) architecture integrating local databases and dynamically generated web search queries to augment the model with accurate context.
- Designed a multi-agent workflow involving format-aware topic generation, content planning, and multi-query information retrieval to enhance output quality and factual accuracy.
- Iteratively optimized the system architecture and managed extensive API integrations, successfully adapting the pipeline to handle continuous requirement changes.

Yonsei Artificial Intelligence (YAI)

Member

Yonsei University

Jan 2025 - Present

- Developed a toy project focused on summarizing daily hot topic news using NLP techniques.
- Implemented an emotion-based background color adjustment system.
- Participated in weekly paper reading groups focusing on Computer Vision and Natural Language Processing.
- Trained a Pokemon battle agent using Reinforcement Learning for the YAICON project. ([link](#))
- Developed an LLM-driven autonomous agent in Minecraft for the YAICON project, successfully decomposing the complex goal of 'Defeating the Ender Dragon' into sequentially executable subgoals. ([link](#))

Korean Augmentation To the United States Army

Military Police, Company Senior KATUSA

Camp Humphreys, Korea

Feb 2023 - Aug 2024

- Served as the Senior KATUSA, leading and managing a company of 80 soldiers while advocating for their rights and welfare.
- Demonstrated strong cross-cultural communication skills and leadership within a joint US-ROK military environment.

Student Council

Academic Committee Member

Department of Computer Science, Yonsei University

Mar 2022 - Dec 2022

- Planned and executed academic projects and events for computer science undergraduate students.
- Collaborated with other committees to foster and support the department community.

SKILLS & INTERESTS

Programming Languages: Python, C/C++

Languages: Korean, English (OPIc IH)

Interests: Computer Vision, Video, Efficient Generative Models, Multimodal Learning

CLASSES

Courses Taken: Computer Programming, Object-Oriented Programming, Data Structure, Introduction to Computer Science, Programming Languages Structure, Algorithm Analysis, Computer Vision, Computer System, Computer Network, Introduction to AI Research, Operating System, Computer Architecture, Machine Learning, Reinforcement Learning, Distributed Learning, Deep Neural Networks, Data Privacy, Large Language Models, AI Systems, Introduction to Data Visualization
